

GARCIA GARCIA
DESIGN & BUILD

BILSTEIN GROUP

Design & Build Logistics

Garcia, Garcia has developed a new logistics unit for the German Bilstein Group, one of the major global players in the sector of after-sales of vehicle parts.

The new facilities will maximise the company's supply chain and at the same time leverage the growth of its business in Portugal, as well as providing support for other needs arising in other geographic areas. One of the engineering challenges taken on by Garcia, Garcia was to maximise the open internal floor area and to eliminate structural obstacles in the production area. A structural solution was therefore defined in pre-fabricated concrete with a wide structural grid in order to reduce the number of pillars.

Its construction also included the option of flooring with a high standard of flatness with FM2 certification, as well as the installation of seven loading bays for HGVs and five for vans.

YEAR OF CONSTRUCTION: 2017

TOTAL FLOOR AREA: 9.100 m²

PRODUCTION AREA: 7.000 m²

ADMINISTRATIVE AND SOCIAL AREA:
2.100 m²

LOCATION: Malveira

LEAD TIME : 7 Months
