BRASMAR - INDUSTRIAL

Construction Industrial

After the construction of the Logistic Center, Brasmar entrusted Garcia Garcia Garcia the construction of its new Food Production Unit.

This project, for the development of a frozen seafood processing unit, included the rehabilitation of the existing plant with 1 800 m² and the construction of a new area with 6 000 m².

The new unit, due to the large cold rooms, was equipped with an advanced climate control system to guarantee the required temperature control.

In addition, to assure an optimal thermal insulation a high performance isothermal panel was used. Noteworthy is the freezing tunnel spiral that was installed in the plant.

YEAR OF CONSTRUCTION: 2017

TOTAL FLOOR AREA: 7.800 m²

ADMINISTRATIVE AND SOCIAL AREA: 750 m²

LOCATION: Trofa

LEAD TIME : 8 Months
