

GARCIA GARCIA
DESIGN & BUILD

FAIRJOURNEY BIOLOGICS

Design & Build Industrial

FairJourney Biologics, a biotechnology company, entrusted Garcia Garcia with the design & build of its new research centre, in Porto.

Located in front of Avenida AEP, one of the main entry arteries to the city of Porto, it shapes the city entry with its irreverent façade, marked by the imposing three-dimensional white concrete prefabricated panels that point to the scientific activity of the company.

This new centre will provide FairJourney's employees with all the conditions necessary for carrying out their professional activity in this new centre, with fully equipped laboratories, as well as leisure areas to promote their well-being.

The focus is on the 140 laboratories, the foyer, the social areas and the various outdoor patios scattered around the building and its façade, providing the opportunity for small garden spaces to be discovered.

The building has a total of seven floors, three below ground level and four above.

YEAR OF CONSTRUCTION: 2021

TOTAL FLOOR AREA: 8100

LOCATION: Porto

LEAD TIME : 20 months
