SANTA SUSANA VILLA

Construction Residential

In the uptown area of the city of Vizela, on an old farming estate dominated by a manor house from the beginning of the 20th century, the private condominium of Santa Susana was born.

With 6 apartment blocks, comprising a basement, ground floor and 4 floors, with a total of 67 apartments, will benefit from a unique location and views over the Vizela River valley.

Built with superior material and finishes, the condo facade is notable for the use of glass and phenolic coatings. This project adds to a type of property stock that was becoming scarce in this industrial municipality.

This property development also made it possible to modernise and bring new life to the northern part of the city, extending the effective network of the urban area.
